Dostupné

Nebezpečné

Dissolved silica is found in almost all natural waters. Its presence is undesirable for many industrial uses because of scale formation. High-pressure boiler turbines are especially susceptible. This simple, low-cost color disc method is the most accurate visual test kit method.

**Popular in many industrial applications, such as boiler turbines that are susceptible to scale**

**Provides fast results with an easy-to-carry test kit**

**Simple, low-cost color disc method is the most accurate visual test kit method**
